Sponsorship required to work in the US

Work Experience

AI Planning Project
January 2018 to March 2018

Studied AI searching and planning basics in the Artificial Intelligence class. Used NetLogo to create a path finding for a fishing vessel simulation. Used Gecode to implement a student class registration system with constraints satisfaction.

Machine Learning Project
September 2017 to December 2017

Studied the fundamental knowledge of machine learning in the Compute Vision class. Trained a set of fruit images from ImageNet by CNN network in TensorFlow and Python. Made a simple android app to recognize the level of ripeness of bananas.

Software Developer Internship

July 2017 to September 2017

• Participated Unity 3D related project, UI related. Helped to implemented a test tool.
• Participated in debugging the team project using C++. The project is to do segmentation and coloring on human hair.

RECENT PROJECTS

Education

Master of Science in Computer Science

California State University
2019
